

EMPEREX CORPORATION

Emperex Corporation is an international software products company specializing in Software Configuration Management (SCM), Software Deployment (SD). Our solutions ensure reliability, integrity and reproducibility for applications and assist with audit compliance.

Founded in 1986, Emperex Corporation has established an excellent reputation for providing effective SCM solutions to the financial, telecommunications and software development industries. PrimeCode®, our SCM solution, is the most comprehensive of its kind for the NonStop™ platform. Emperex utilized its experience in SCM and deployment to expand its product offerings in 2004 to include Software Deployment, recognizing a need for secure and managed distributions for small to medium distribution requirements. QUNETIX, our software deployment product, is a comprehensive, cross-platform tool that provides software distribution and installation over a heterogeneous network of any size.

An effective and comprehensive **Software Configuration Management (SCM)** process manages the risks associated with planned software changes. **SCM** manages the entire software lifecycle - from the creation or acquisition of source code through to obsolescence - to provide Referential Integrity, Reliability and Guarantees Reproducibility. **SCM** reduces errors and provides referential integrity by tracking the relationship between all application components at each stage of development, packaging, testing while adding security and confidences through separation of duties and task management.

Software Deployment (SD) is integral to an effective and comprehensive SCM process as it manages and automates the packaging, testing and distribution of any release. An effective **SD** solution augments source version and object management with secure and managed deployments to provide Guaranteed Reproducibility, Automated Distribution, Release Archive Management and Detailed Audit Trails. The use of a secure **SD** tool improves release reliability and reduces the costs of manual intervention.
