

## QUNETIX SD Lite

### SOFTWARE DEPLOYMENT

#### Automated Packaging, Testing and Distribution

**QUNETIX SD Lite** is a cost effective and easy-to-use deployment solution for heterogeneous networks. Distribute, install or update software on your network systems (PC or Server) without formal training or costly investments of time and money. The **Lite Release** is configurable for any number of systems, ideal for a small to medium distribution requirement.

**QUNETIX SD Lite** manages the packaging and deployment of any release. **QUNETIX SD Lite** improves reliability by providing Guaranteed Reproducibility, a Secure Release Repository, Automated Distribution and Detailed Audit Trails.

#### Benefits

- Multi-Platform Support (Windows, Linux, Unix)
- No Lengthy or Costly Implementations
- No Formal Training Required
- Intuitive Operations
- Immediate Productivity
- Streamline Deployment Activities & Save Time
- Guaranteed Reproducibility Protects your Assets

#### Features

- Easy to Install – Up & Running in half an hour
- Intuitive and Easy to Use
- Workflow Based GUI
- Easy-To-Follow Tutorial
- Distribute Any Files
- Secured Release Repository
- Guaranteed Reproducibility
- Secure Communications and Authentication

**QUNETIX SD Lite** automates the deployment of software assets to systems safely and securely by guiding the user through 4 logical stages: Acquire, Build Portfolio, Test and Distribute.

- Package releases securely
- Verify release integrity
- Estimate distribution time & number of files
- Distribute, Install, Remove or Replace any file or application
- Retry or Roll Back any distribution
- Define and manage on-error behaviour
